PROJECTS

AI-Based Hospital Queue Optimization System | [GitHub](#)

Stack: HTML, CSS, JavaScript, Flask, MySQL, Scikit-learn, Pandas, NumPy

- Developed an AI system to predict patient waiting time.
- Implemented smart token generation and scheduling.
- Used machine learning to reduce queue congestion in hospitals.

World's Fastest Car | [GitHub](#)

Stack: HTML/CSS, JavaScript, Glassmorphism

- Interactive UI: Click on any car in the hero section to smoothly scroll down and reveal its detailed specifications
- Modern Glassmorphism Design: I implemented a clean, futuristic glass effect using CSS backdrop-filter for a premium feel.
- Fully Responsive: Built with CSS Grid and Flexbox, the layout adapts seamlessly from a 5-column desktop view to a mobile-friendly design..

ACHIEVEMENTS & ACTIVITIES

- External Jury Award – Hackathon (GIET University)(2026) — Developed an AI-integrated hospital queue optimization system with my team.
- Attended Workshop on Python & Data Science (2026) — covered applied ML concepts and data pipeline design.
